README

Subject: Use of Windows 2000 or Windows XP Postscript Print Drivers

This CD contains two versions of the Postscript Print Drivers for Windows 2000 and Windows XP. One version has a plug-in and the other doesn't. The version with the plug-in is recommended for most applications. The version without the plug-in is recommended for users who use drawing applications or applications like Quark Express, Freehand or FrameMaker. Throughput for those applications maybe significantly slower using the version with the plug-in.

However, the following features are lost by using the version without the plug-in

1. Specify Job Owner
2. Job Owner Name
3. Password
4. Job Type - Secure Print
5. Job Type - Sample Print
6. Job Type - Delayed Print
7. Job Account Information
8. Correction of 2up/6up rotation
9. UEL and PJL Command

Summary:
Windows 2000 and Windows XP Users who print using Postscript and who use drawing applications and/or applications like QuarkExpress, Freehand or Framemaker should use the print driver version without the plug-in. Throughput speed will be better than with the other driver but some features will be lost.
